**Tips on how to work on social cognition concepts
while watching TV with your kids**

- 1. Pick a movie or a TV show that has real life situations.
(Best if the topics resemble the ones your child struggles with.)**
- 2. Do not use animated shows or movies.
(They make it much harder to read facial expressions.)**
- 3. Watch together with your child on a device where you can
stop/pause the show.**
- 4. If you think your child is going to get frustrated with frequent
pausing, let them watch the show first or use a show that your
child is already familiar with.**
- 5. Watch our tutorial video on how to work on social cognition
concepts while watching TV with your kids to know what kind of
questions to ask your child.**
